

NR 1"½ / NRI 1"½

CONDUCTIVE ELECTRODES

Description	Set of electrodes for the control of the level in conductive liquids. Usable in all kind of tanks, opened or closed.																
Body material / colour	PVC / red																
Electrode	SS AISI316 Ø 5 mm. Optional Titanium. The number of electrodes depends on the function of the required level control. Consult the specific characteristics of each level relay.																
Electrode length	Standard, 1000 mm. Others lengths on request. All the electrodes are delivered at the same length. For setting the level detection points, cut each electrode to the required height. Keep in mind that the common electrode must have a length equal or longer than whichever other one.																
Process connection	Top screw 1"½ G																
Electrical connection	Connector DIN43650																
Maximum temperature	+70 °C																
Pressure	5 K/cm ²																
Electrode insulation	Optionally, the electrodes can be protected with Poliolefine insulation to guarantee the set detection points.																
Protection	IP65																
Usable with	Level relays for conductive liquids: relays families PN, DN and SN																
Warning	DISIBEINT ELECTRONIC SL is not responsible of the electric behavior of these electrodes when using control relays belonging another manufacturers.
